Course Description

Preparing for college entrance? This course can increase students' chances for college admission. Students will review geometric concepts and test-taking techniques by practicing real SAT exams individually and with peers.

This course is designed to prepare students for the SAT by making them familiar with the directions, layout, and test questions, while teaching strategies to improve their knowledge of the tested material and their score on the SAT.

Methodologies

Lecture, Demonstration, Practice

Course Materials

The Official SAT Study Guide

Photocopied handouts prepared by the instructor

Course Overview

The class will meet for eight 2-hour sessions:

Session 1: Practice Test

Session 2: Lines/Angles

Session 3: Triangles

Session 4: Rectangles/Squares

Session 5: Circles

Session 6: Areas/Perimeters

Session 7: Word Problems

Session 8: Review

About the Professor

Benjamin Russell Davis has a bachelor's degree in economics from George Mason University and a master's degree in information systems from George Mason University. He has prepared students for the math section of the SAT for over three years.
